

OEM CLEANING KITS

Why use our cleaning products?

Area of application: Cleaning of all forms of printer/flying heads as well as chassis of related equipment.

Cleaning products for thermal ID card printers

Regardless of use, sooner or later your printer for data or cards will become dirty because of dust, glue residue or other external influences. These impurities adhere to and are burnt into the printer head. This is easily noticed by waning sharpness of the printing, blurred photos or any data on the cards, which can lead to an expensive change of printer head if the printer is not cleaned. For best printing quality and service life, clean your printer at regular intervals.

PART NOS. Nisca kit53 Cleaning Kits for Nisca ID Printers
